AKASH JADON

Lead AI Systems Architect & Senior AI Engineer | Head of Technology | Principal Automation Engineer

Location: Agra, Uttar Pradesh, India (Remote Global / US EST) | Phone: +91 76687 58238 | Email: evolvixtechnology@gmail.com
Portfolio: evolnex.digital | GitHub: github.com/akashjadon04 | LinkedIn: linkedin.com/in/akashjadon | Live Demos: evolnex.digital/astraquote

PROFESSIONAL SUMMARY

Lead AI Systems Architect and Principal Automation Engineer with 4+ years of hands-on experience designing and deploying high-concurrency LLM orchestration kernels, autonomous agent runtimes, and enterprise data pipelines. Creator of Astra AI Core (4,400+ LOC custom Python runtime with FSM circuit breakers and streaming reasoning state machines), BossConsole (native JVM/Kotlin desktop harness running Claude Code, Gemini, and 100+ Model Context Protocol tools), and DevisBat (commercial Swiss fintech SaaS with computer-vision item estimation and Swiss QR-bill invoice generation). Deep technical expertise in low-latency inference, atomic concurrency control (Redis SETNX), hybrid dense-sparse RAG (pgvector HNSW + BM25), and resilient full-stack systems on Next.js 15, TypeScript, Python, and AWS. Demonstrated track record in cross-functional technical leadership, agile delivery, and end-to-end product ownership.

TECHNICAL SKILLS & CORE COMPETENCIES

• **AI & Agentic Orchestration:** Autonomous ReAct loops, Model Context Protocol (FastMCP / MCP over SSE & stdio), multi-agent swarms, tool calling, streaming token parsers (<think> parsing), hybrid dense-sparse RAG, prompt engineering, LLM fine-tuning, swappable model abstractions (Claude 3.5 Sonnet, Gemini 2.5, DeepSeek, Groq).

• **Concurrency & Reliability:** Distributed Redis atomic locks (SETNX), token-bucket rate limiting, exponential backoff retries with jitter, Dead-Letter Queues (DLQ), deterministic idempotency keys (SHA-256), per-provider Finite State Machine (FSM) circuit breakers.

• **Full-Stack & Cloud Systems:** Next.js 15 (App Router, Server Actions), React 19, TypeScript, Python (FastAPI, asyncio, Uvicorn, PyTorch), PostgreSQL, pgvector (HNSW indexing, cosine similarity), Supabase Row-Level Security, Redis, AWS (ap-south-1), Docker, Vercel Edge Runtime, Linux/Unix.

• **APIs, Attribution & Webhooks:** Meta Conversions API (CAPI) server-side tracking, Meta WhatsApp Cloud API, Telegram Business API, Close CRM API & webhooks, Google Tag Manager server-side, HMAC SHA-256 webhook signatures, AES-256-GCM payload encryption.

• **Leadership & Delivery:** Cross-functional technical leadership, agile product ownership, system architecture reviews, SLA monitoring, zero-downtime releases.

PROFESSIONAL EXPERIENCE

Head of Technology & Lead AI Systems Architect | Evolnex Digital

January 2023 – Present | Remote / Global Studio (Registered Enterprise: UDYAM-UP-01-0202485)

- **Studio Technical Leadership:** Direct architecture, engineering delivery, and technology strategy for an agile 7-person software engineering studio building bespoke AI platforms, autonomous automation pipelines, and high-concurrency web applications.
- **Astra AI Core (Runtime Kernel):** Engineered a 4,400+ LOC production AI backend running a 31-section telemetry, validation, and multi-model routing pipeline. Implemented per-provider FSM circuit breakers across Groq, Gemini, DeepSeek, and Claude, maintaining 99.9% uptime with zero user interruption during external API degradation.
- **DevisBat (Swiss B2B SaaS):** Architected a commercial trade quoting and fintech platform (devisbat.ch) converting technician voice notes, site photos, and unstructured text into priced quotes across 16,800+ trade catalogue items; integrated Swiss canton wage tables and statutory Swiss QR-bill invoice generation with Supabase RLS.
- **AstraQuote Lead Engine (Data Pipeline):** Designed an autonomous multi-source Swiss lead intelligence engine with canonical E.164 normalization, contact extraction, and distributed Redis atomic locks (SETNX) that eliminated 100% of webhook race conditions across 50,000+ operations. Deployed live interactive public dashboard (evolnex.digital/astraquote).
- **Evolnex Relay (Encrypted Gateway):** Built a zero-downtime omnichannel messaging gateway on Vercel Edge Runtime with Upstash Redis, integrating official WhatsApp Cloud API, Telegram Business API, and Gmail OAuth with record-level AES-256-GCM encryption and HMAC signature verification.
- **Enterprise Client Deliveries:** Shipped full-stack platforms and institutional technical tenders, including Conservation HRMS & Project Management for Aaranyak and statewide Primary LMS portals for West Bengal Primary Education.

PROFESSIONAL EXPERIENCE (CONTINUED)

Senior Automation & AI Solutions Consultant | Independent / Client Deployments

June 2021 – December 2022 | Remote (Clients across France, Switzerland, UAE, and India)

- **Automated Workflow Engineering:** Architected and deployed end-to-end data extraction, lead scoring, and CRM synchronization pipelines for international B2B clients, reducing manual operations by over 80%.
- **API & Webhook Infrastructure:** Integrated bidirectional webhook flows between custom landing pages, Close CRM, HubSpot, and PostgreSQL using custom Python microservices and self-hosted n8n Docker containers.
- **Resilient Concurrency & Throttling:** Implemented token-bucket rate limiting and exponential backoff retry algorithms with dead-letter queues (DLQ), ensuring zero data loss during third-party API throttling and network blips.

FEATURED SYSTEMS & OPEN-SOURCE ARCHITECTURES

BossConsole — Native Multi-Threaded AI Agent Operator Console | Code Repository ■

Kotlin / Compose Desktop / JVM / Chromium / Model Context Protocol (MCP)

- Engineered an open-source, multi-threaded JVM desktop harness for running advanced autonomous AI agents (Claude Code, Gemini, Codex) natively without Electron memory overhead. Features a dynamic 100+ MCP tool harness with runtime hot-reloading and an encrypted QR terminal handoff bridge for real-time mobile execution control.

AstraQuote Lead Engine — Autonomous Pipeline & Interactive Dashboard | Code Repository ■

Python 3.12 / Redis SETNX / SQLite / E.164 Normalization / Bootstrap 5

- Engineered an autonomous Swiss trade intelligence pipeline with rule-based multi-layer verification and zero-hallucination DLQs. Built a self-contained interactive public dashboard (evolnex.digital/astraquote) serving 500+ verified Swiss plumbing & HVAC leads with instant canton filtering and JSON/CSV exports.

SwissQuote AI (DevisBat Engine) — Fintech Trade Quoting & Statutory Invoicing | Code Repository ■

Next.js 15 / Supabase RLS / Gemini Vision / Swiss QR-Bill / Stripe

- Commercial Swiss trade quotation kernel combining multi-modal computer vision line-item parsing, trade margin rules across 16,800+ articles, and automated Swiss QR-bill PDF generation with Canton-specific labor tables.

EDUCATION

Lovely Professional University (LPU) | Phagwara, Punjab, India

Bachelor of Commerce (MAIF) – Certified Management Accountant (US CMA track) | Graduated July 2024

Academic Standing: CGPA 8.52 / 10.0 | Relevant Coursework: Computational Financial Modeling, Database Architecture & SQL Analytics (MySQL), Quantitative Analysis, Business Intelligence.

CERTIFICATIONS & CREDENTIALS

- **Automation and Agentic AI Systems Architecture:** Comprehensive mastery covering autonomous ReAct loops, multi-agent orchestration, FastMCP tool calling, and enterprise workflow execution (2026).
- **Full-Stack Software Engineering & Distributed Systems:** Production certification covering Next.js 15, React 19, TypeScript, microservices, REST/GraphQL APIs, and cloud infrastructure (2026).
- **Database Systems & Business Analytics:** Relational data modeling, MySQL query optimization, and Power BI business analytics (Coursera & Udemy, 2024–2025).
