

AKASH JADON

LEAD AI & AUTONOMOUS SYSTEMS ARCHITECT | FULL-STACK ENGINEER

Email: evolvixtechnology@gmail.com | Phone: +91 7668758238 | Location: Remote (Guaranteed US EST Overlap)
Portfolio: https://evolnex.digital | GitHub: https://github.com/akashjadon04 | Live Engine: https://evolnex-relay.vercel.app

PROFESSIONAL SUMMARY

Senior AI Systems and Full-Stack Architect with 3+ years engineering high-concurrency LLM orchestration kernels, native desktop agent harnesses, and enterprise data infrastructure. Architect of Astra AI Core (4,400+ LOC custom Python runtime with FSM circuit breakers and streaming reasoning state machines), BossConsole (native JVM/Kotlin desktop harness running Claude Code, Gemini, and 100+ MCP tools), and DevisBat (commercial Swiss fintech SaaS with computer-vision line-item estimation and QR-bill generation). Deep expertise in low-latency inference (Groq/NVIDIA/Gemini), atomic concurrency control (Redis SETNX), and resilient full-stack web applications on Next.js 15, TypeScript, and AWS.

TECHNICAL SKILLS & CORE COMPETENCIES

Agentic AI & Orchestration:	Autonomous ReAct loops, multi-agent coordination, streaming <think> state machines, Model Context Protocol (MCP), prompt engineering, tool-calling pipelines, RAG, Swappable LLM abstractions (Claude 3.5 Sonnet, Gemini 2.5, Groq, DeepSeek).
Concurrency & Reliability:	Distributed Redis atomic locks (SETNX), token-bucket rate limiting, exponential backoff retries with jitter, Dead-Letter Queues (DLQ), deterministic idempotency keys (SHA-256), per-provider FSM circuit breakers.
Full-Stack & Cloud Systems:	Next.js 15 (App Router, Server Actions), React 19, TypeScript, Tailwind CSS, Python (FastAPI, asyncio, Uvicorn), PostgreSQL (Row-Level Security), Supabase, Redis, AWS Mumbai (ap-south-1), Docker, Vercel Edge Runtime.
APIs, Attribution & Mobile:	Meta Conversions API (CAPI) server-side tracking, Meta WhatsApp Cloud API, Telegram Business API, Close CRM API & webhooks, Google Tag Manager server-side, Capacitor Android SDK native compilation.

REPRESENTATIVE PRODUCTION ARCHITECTURES

Astra AI Core — High-Throughput Autonomous AI Runtime & Streaming Kernel

Python / FastAPI / Playwright / SSE / Supabase

- Kernel Architecture: Engineered a 4,400+ LOC production AI backend running a 31-section telemetry, validation, and multi-model routing pipeline.
- FSM Circuit Breakers & Auto-Failover: Implemented per-provider Finite State Machine circuit breakers monitoring failure rates across NVIDIA GLM, DeepSeek, Gemini, and Groq, rerouting active streams with zero user interruption.
- Streaming Reasoning State Machine: Built a real-time token parser that intercepts <think>...</think> tags, strips them from client responses, renders collapsible reasoning accordions, and triggers automated pre-flight web search upon uncertainty detection.
- Autonomous ReAct Engine: Deployed autonomous tool-calling loops with headless Playwright browser sandboxes for live web interaction and self-healing execution recovery. Backed by dual-key rotation vaults and 500-slot semantic LRU response caches.

BossConsole — Native Multi-Threaded AI Agent Operator Console

Kotlin / Compose Desktop / JVM / Chromium / MCP

- Native Multi-Threaded Runtime: Engineered an open-source JVM/Kotlin desktop harness for running advanced AI agents (Claude Code, Gemini, Codex) without the memory bloat and latency of Electron wrappers.
- 100+ MCP Tool Harness: Implemented a hot-reloadable Model Context Protocol (MCP) tool harness allowing agents to adapt and reshape tools dynamically at runtime without restarting the application.
- Mobile QR Terminal Handoff: Built a secure tunneling bridge that generates an encrypted QR code, enabling operators to control agent terminal execution in real-time from mobile devices. Packaged for macOS DMG, Windows MSI, and Linux.

DevisBat (swissquote-ai) — Commercial Swiss Trade Quoting & Fintech SaaS

Next.js 15 / Supabase / Gemini Vision / Stripe / Swiss QR-Bill

- Production Swiss SaaS: Built a B2B platform turning technician voice notes, site photos, and free-text descriptions into priced commercial quotes and legally compliant Swiss QR-bill invoices across 12 trade categories.
- 16,800+ Article Catalogue Engine: Engineered a trade-scoped matching engine against a 16.8k row catalogue with automated fallback to Gemini Vision price estimation and human-in-the-loop catalogue auto-learning.
- Fintech & Statutory Compliance: Integrated Swiss canton-specific labour wage tables, travel surcharges, material margin rules, Swiss VAT (8.1%), and automated QR-bill invoice generation with Supabase Row-Level Security.
- Micro-Frontend Architecture: Deployed dual git-connected Vercel instances (customer web app + administrative portal) with multi-tenant company isolation and automated trial lifecycle state machines.

AstraQuote Lead Engine — Autonomous Pipeline & Concurrency Engine

Python / Redis / DuckDuckGo API / E.164 / Open Source

- Multi-Layer Lead Pipeline: Architected an autonomous data engine executing Layer 1 multi-source discovery, Layer 2 E.164 phone and canton normalization, and Layers 3–6 adaptive research and enrichment loops.
- Atomic Concurrency Control: Implemented canonical phone/email SHA-256 fingerprinting with atomic Redis locks (SETNX) to completely eliminate webhook race conditions, redundant API costs, and duplicate CRM records.
- Deterministic Verification: Guaranteed exact target lead counts via non-hallucinatory web scraping, contact discovery, and automated Dead-Letter Queues (DLQ) with Slack alerting. Open-source on GitHub.

Evolnex Relay — AES-256 Encrypted Omnichannel Webhook Gateway

Next.js Edge / Upstash Redis / WhatsApp Cloud API / Telegram API

- Zero-Downtime Messaging Gateway: Deployed a sub-second edge routing hub integrating official WhatsApp Cloud API, Telegram Business API, and Gmail OAuth on Vercel Edge Runtime.
- Enterprise Security Architecture: Built record-level AES-256-GCM encryption with cloud-separated keys, webhook HMAC signature validation, intelligent shadow-mode AI triage, and fail-safe human takeover controls.

PROFESSIONAL EXPERIENCE

Founder & Lead Systems Architect — Evolnex Technologies

2023 – Present

- Direct technical architecture and engineering delivery for an agile 7-person software engineering studio specializing in bespoke AI platforms, high-throughput automation pipelines, and enterprise web applications.
- Architected and shipped mission-critical web applications, Progressive Web Apps (PWAs), and institutional proposals (including Aaranyak Conservation HRMS and West Bengal Primary LMS).
- Led development of proprietary SaaS products (DevisBat, Astra AI Core, Relay), managing full software development lifecycles from initial Figma UX design tokens to production Kubernetes/AWS cloud deployments.

CERTIFICATIONS & PROFESSIONAL CREDENTIALS

Certificate in Automation and Agentic AI

Udemy | 2026

Advanced curriculum covering autonomous agentic execution loops, multi-agent orchestration, tool calling, and enterprise workflow design.

Certificate in Full-Stack Software Engineering

Udemy | 2026

Comprehensive engineering credential covering Next.js 15, React 19, TypeScript, Node.js microservices, REST/GraphQL APIs, and cloud deployments.

Registered Micro Enterprise (MSME Udyam)

Govt. of India | Verified

UDYAM-UP-01-0202485 — Officially registered Indian digital engineering and software development enterprise.
